

ATTACHMENT C

Amendments to the Claims

Please cancel claims 1-7 without prejudice or disclaimer.

This listing of claims will replace all prior versions, and listings, of claims in the application.

1-7. (Canceled).

8. (New) A transmitter apparatus for sending a data transmission signal to an electrical network, wherein the transmitter apparatus comprises signal-shaping and adjustment devices and connecting devices including accessories for connection to the electrical network, including a signal amplifier and one or both of a connecting cable connecting device between the transmitter apparatus and a connecting point of the electrical network, the improvement wherein the transmitter apparatus is divided into at least a first part and a second part, said second part including at least a connecting unit for connection to the electrical network and a connecting cable for connecting said second part at least near to phase or zero rails of the electrical network, wherein the length of the connecting cable is under 5 m and the connection is not in or to a wall outlet.

9. (New) A transmitter apparatus according to claim 8 wherein the length of the connecting cable is under 1 m when the second part is connectable to the phase and zero rails.

10. (New) A transmitter apparatus according to claim 8 wherein the first part and the second part are placed in the same equipment unit.

11. (New) A transmitter apparatus according to claim 8 wherein the second part is incorporated into a remote unit with respect to first part and their mutual spacing is over 1 m.

12. (New) A transmitter apparatus according to claim 8 wherein the signal input and the connecting cable can be connected to 1-phase rails in a direct-current network or an alternating-current network or to another connection point of a network cable.

13. (New) A transmitter apparatus according to claim 8 wherein the signal input and the connecting cable can be connected to 3-phase rails or to a 3-phase outlet or to another connection point of a network cable.

14. (New) A transmitter apparatus according to claim 8 wherein the connection between first part and second part comprise one of a wired connection, a wireless connection and an optical fiber cable connection.
